Sony ICF B01

AM / FM Radio with Resistant Tuning allows the station to be tuned before it's put away for emergency use and will stay in that position until it's changed by the user. Built-in Power Generator with 1 minute of cranking at the optimum rate indicated by the green LED charging indicator, the user is provided with up to 60 minutes of AM radio, 40 minutes of FM radio or 15 minutes of light. The unit can be operated using the Power Generator or 2 "AAA" batteries (not supplied). Two Light Settings allow you to choose between using a flashlight or a softlight which adds to the functionality of the radio. In the flashlight setting, the LED provides a bright light that can be used to illuminate an object or help guide the user when walking. The softlight is a low level light that adds illumination to a small area acting as a night light or comfort light when a group of children or adults are gathered around it. When the Power Generator handle is turned at the optimum rotating speed (in either direction), the green LED Charging Indicator will illuminate. Continuing to turn the handle at this same rate for approximately one minute (120 rotations) will provide a full charge. Bright Orange Color makes it easy to locate. The unit is designed to be splash resistant for all weather operation. It cannot, however, be immersed in water. It can easily fit in an emergency kit, kitchen drawer or the glove box in your car, ready when you need it.

General	
Product Type	Portable radio
Width	13 cm
Depth	5.2 cm
Height	7.7 cm
Weight	285 g
Enclosure Colour	Silver

Audio System	
Sound Output Mode	Mono
Water Resistant	Yes
Features	Rechargeable capability, built-in flashlight, self power g
